Continuation of 5. does NOT place the application in condition for allowance because: Applicant has argued that in the final rejection, the Joshi reference was misinterpreted and that Joshi does not disclose the limitations added by applicant's amendment filed 10-21-02. This argument is respectfully disagreed with because a conductor layer can comprise more than one layer, so that the Al-Cu layer is a portion of the conductor layer, GeH4 gas is flowed, and an impurity layer is then formed and reflowed (col. 7, lines 28-34 and col. 8, lines 1-6). In another embodiment, the Al-Cu is formed, GeH4 is flowed, and the W material is formed and the layers are reflowed(col. 8, lines 40-51) . The Al-Cu portion is the portion of the conductive layer which is deposited before the impurity layer is formed, and the W material is the further portion of the conductive layer which is deposited, which reads applicant's claims. The impurity layer which is formed comprises Ge and Al-Cu-Ge. ..
